```
scrolling content
               screen
               \cdotcontentOffset
nav
               -viewportTop = contentOffset + nav height
                Third case:
                  Top of cell in "expansion zone"
                  celltop = indexPath.row * h_{max}
                  height = scaled linearly over zone
```
